VANK

We create furniture and objects that support well-being, combining form, function, advanced technologies and plant-fibre-based materials.

We believe in a circular economy. We use recycled materials, materials from renewable sources and plant-fibre-based materials.

VANK_FLIP is a modular system of mobile acoustic partitions designed to flexibly divide open-plan spaces. Easy to move, rotate and connect, the panels create temporary zones for meetings, focused work or relaxation and are available with VANK_BIO plant-fibre-based panels or panels made from recycled rPET.

SEE CRITERIA

VANK_SOFME is a modular soft seating system designed to adapt to changing spaces and needs. The same modules can create armchairs, sofas, islands, corner setups or free-form compositions. Replaceable covers and modules make it easy to repair, refresh and extend the life of the product. The system uses post-industrial foam and upholstery fabrics containing recycled fibres or natural raw materials.

SOFME

VANK_SOFME

VANK_BOX has been designed to create spaces for meetings and individual work, creating an “oasis of peace” within open-plan office environments. It helps maintain a balance between personal space and teamwork.

BOX

VANK_BOX makes loud workspaces a thing of the past. Clearly defined zones help support concentration and creativity, while acoustic outer panels enhance acoustic comfort throughout the open space. Thanks to the castors, the mobile pods can be easily repositioned to adapt to changing spatial, visual and acoustic needs.

VANK_PANEL

VANK_PANEL is a collection of high-performance acoustic panels that combine Class A sound absorption with distinctive design. Made from BIO-based fibres or recycled rPET, the panels can be upholstered in a wide range of fabrics and colours. They can be arranged into custom wall compositions or expressive acoustic artworks.

Our acoustic solutions use plant-fibre-based materials made with fibres such as flax and hemp. These annual plants absorb carbon dioxide from the atmosphere as they grow. Their fibres are renewable and can replace part of the fossil-based materials traditionally used in acoustic products.

VANK_CUBE is a modular system made from plant-based fibres, built around a single element, designed to adapt to changing workspaces and needs. A single module can serve as a seat, box or table, while multiple modules can create benches, desks, counters, shelves, bookcases or space-dividing walls.

VANK_LONG is a distinctive lounge collection with an industrial aesthetic. Lounge chairs and footstools with soft bolster cushions and seats supported by elastic webbing provide comfort and encourage relaxation.

LONG

With the dynamic changes in work models, where work is now possible from almost any location, office environments need to be equally flexible and adaptable. VANK_LONG sofas with high backrests help create zones for both work and relaxation. The bases, equipped with lockable wheels, allow for easy and flexible rearrangement of spaces.

VANK_LONG

VANK_RING is designed with the disassembly and further processing of selected components in mind. At the end of its useful life, the upholstery, filling and frame can be separated to facilitate sorting and further processing. The seats are filled with post-industrial polyurethane foam, allowing material remaining from the foam manufacturing process to be reused as filling in new products.

RING

VANK_MONT creates personal, calming spaces in offices, hotels and public interiors. Seats with high upholstered screening panels provide privacy and acoustic comfort, while the modular design allows for flexible configurations – from individual retreats to double or triple sofa islands for small-group meetings and conversations.
